helping people breathe

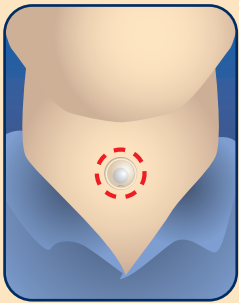

# Smaller Smarter Smoother

**The Shikani Speaking Valve<sup>2</sup>**  
One valve. Infinite possibilities.<sup>™</sup>

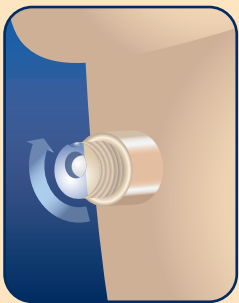

The Shikani Speaking Valve<sup>2™</sup> is a patent pending, two-way valve that offers decreased work of breathing and the ability to adapt the flow and closure characteristics to each patient's individual needs. Benefits include:

- Restored functional airway system
- Facilitated speech with enhanced naturalness
- Improved swallowing
- Improved olfaction
- Increased patient acceptance
- Reduced infections
- Managed secretions
- Reduced aspiration

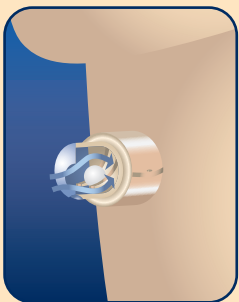

## Smaller

The compact Shikani Speaking Valve<sup>2™</sup> was designed to be smaller and less conspicuous for daily use, offering a lower visual profile for the patient. The valve is available in Clear, Tan, or Blue depending on the level of visibility desired.

## Smarter

The innovative Shikani Speaking Valve<sup>2™</sup> features an adaptable design that allows patients and clinical professionals to easily control airflow and closure performance. By changing the valve's orientation on the inner cannula, tracheotomy patients can adjust the flow and closure characteristics to achieve their optimal breathing and speech setting.

## Smoother

The patent pending Shikani Speaking Valve<sup>2™</sup> utilizes a lightweight ball design which offers lower resistance during inhalation. This enables patients to inhale with greater ease, allowing for an improved overall breathing experience and subjectively better voice.

## The Shikani HME

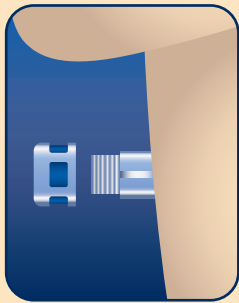

Breathe easily. Speak easily.™

# Unique Uniform Universal

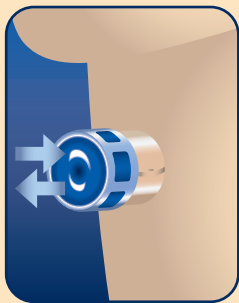

The Shikani Heat Moisture Exchange filter is a patent pending, passive HME uniquely able to be used in conjunction with the Shikani Speaking Valve<sup>2</sup>™. Also available in a version which fits any industry standard 15mm cannula. Benefits of both versions include:

- More normalized temperature levels
- More normalized humidity levels
- More normalized pulmonary conditions
- Increased particulate filtration
- Increased secretion control
- Increased pulmonary health

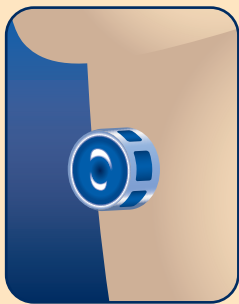

## Unique

The Shikani HME™ was specifically designed to work with the Shikani Speaking Valve<sup>2</sup>™ and this unique combination provides the established pulmonary benefits of HME use, with on-demand speech.

## Uniform

The Shikani HME™ regulates heat and moisture levels for a more consistent and physiologically natural environment.

## Universal

While designed specifically to work with the Shikani Speaking Valve<sup>2</sup>™, the Shikani HME™ is also available in a version that fits any standard 15mm tracheotomy tube cannula.
